Adoption:
A Family for Every Child

Problem: What problem are you experiencing that might be solved by technology?:
We would like to create an online platform for our adoption agency families to log in and complete all the forms needed to adopt, as well as use electronic signatures, and save and return to the site. It also needs to be shared with our Adoption Workers and Agency staff.

Challenge: What technology do you think would solve this problem?:
The real challenge is making it easy, for all families. Regardless of technology equipment and skills. Electronic Signature, with dates recorded Save and return options

Prize:What kind of prize would you offer for this Challenge?: We are not sure what a common prize might be, we are willing to do a financial prize or something else given some input on what others have done in the past.
